

Antiques by Anna

Web Analytics & Digital Strategy Report

Course: Web Analytics

Team: Wendy Ralston, Moksha Shah, Darshi Shah

Tools Used: Google Analytics

Introduction

This report analyzes the digital journey of Antiques by Anna, a boutique vintage jewelry e-commerce store. Using real data from Google Analytics, we evaluated website performance, engagement patterns, and customer behavior to identify what's working and what's not. All insights are filtered through the lens of our customer persona, Sasha: a 41-year-old NYC-based philanthropist and style-savvy vintage collector with a \$200K household income who shops brands like Hermès, Zimmermann, and Quince.

Central question: What does Sasha experience when she visits Anna's site and why doesn't she stay?

Customer Persona: Sasha

Sasha is a collector and trend connoisseur. She seeks one-of-a-kind antique jewelry pieces that reflect her identity, serve as conversation pieces in her social circles, and align with her values around luxury and ethical fashion. She is influenced by exclusive events, editorial content, and community. Her pain points include difficulty finding truly unique pieces that meet her high standards and a desire to build community with like-minded women. Brands that offer rarity, history, and a curated experience resonate most with her.

Web Analytics Findings

Site Overview

Google Analytics data revealed the following baseline metrics:

- Total Views: 3,477
- Active Users: 374
- Bounce Rate: 39.95% — elevated, particularly from Instagram-sourced traffic
- Average Engagement Time per Active User: 2 minutes 56 seconds
- Total Event Count: 8,466
- Key Events (Conversions): 0
- Total Revenue: \$0.00

The site is attracting visitors but failing to convert or retain them. The 0 key events and \$0 revenue signal that the checkout funnel is broken and conversion tracking is not properly configured.

Problem 1: Poor Landing Page Engagement (High Bounce Rate)

Visitors land on generic product grids with no storytelling, no CTA, and no emotional hook. There is no strong welcome message, curated themes, or narrative to guide the user experience. Featured products exist but do not tell a story or reflect the brand's curatorial voice. The site currently feels like a catalog rather than a curated vintage boutique, a critical mismatch for a target user like Sasha who expects an elevated, editorial experience.

Traffic from Instagram is especially prone to bouncing because social media users arrive with high expectations for a cohesive brand world and leave immediately when they encounter a flat, generic grid.

Problem 2: Weak User Retention & Limited Follow-Up

Google Analytics shows a low percentage of returning users. The data breakdown by channel shows:

- Direct: 149 users (32.09%), 46 returning (45.71%)
- Organic Social: 154 users (34.07%), 36 returning (31.89%)
- Organic Shopping: 89 users (18.36%), 8 returning (9.19%)
- Organic Search: 65 users (14.38%), 23 returning (30.23%)

The site has no email signup prompt or "Join the Collector's Circle" style incentive. The "Favorite" feature is buried and not connected to an account or email. Cart abandonment emails exist but are delayed and triggered only in limited cases. Social sharing options (Facebook, X, Pinterest) are present but not integrated into any broader engagement strategy. The 15% discount promo is automatic, it is not being used to build a long-term connection with the customer. There is no personalized messaging, loyalty program, or lifestyle content to bring Sasha back after her first visit.

Problem 3: Broken Checkout Funnel (100% Cart Abandonment)

The checkout funnel data is the most alarming finding. Of the 17 users who initiated checkout (Step 1: Begin Checkout), zero progressed to Step 2 (Add Shipping), Step 3 (Add Payment), or Step 4 (Purchase). The abandonment rate at Step 1 is 100%.

Device breakdown shows 15 of 17 checkout initiations came from mobile (88.24%), while only 2 came from desktop (11.76%). This strongly suggests that the checkout experience is not optimized for mobile, creating friction that causes users to drop off immediately after beginning the process.

Recommendations

Short-Term Fixes

1. Redesign the Landing Page for a Curated Experience Replace generic product grids with editorial-style imagery and storytelling. Add a compelling headline that immediately communicates the brand's value; for example, "Curated Vintage Finds," "One-of-a-Kind Pieces with a Story," or "Authenticated Historical Décor." Feature 1–2 bold CTAs such as "Shop the Collection" and "Learn More About This Era." Group products by style era (e.g., Mid-Century Modern, Victorian) to guide exploration rather than overwhelming the visitor.

2. Upgrade Product Descriptions Move away from generic copy. Each item should read like a personal introduction, highlighting its era, origin, material, and ideal styling context. The goal is to engage both emotion and imagination, encouraging Sasha to envision the piece in her own life.

3. Launch an Email Newsletter An email newsletter is inexpensive, customizable, and creates a direct line of communication. It allows the brand to share new arrivals, stories behind pieces, and exclusive offers, keeping Sasha engaged between visits.

4. Fix Google Analytics Conversion Tracking Add conversion tags for: Email Signup, Purchase Complete, and Referral. Ensure all steps of the checkout funnel are properly tracked so future data can reveal exactly where users drop off and why.

5. Target Thrift/Flea Market Customers with Introductory Products Create a separate-facing segment of the inventory targeting the thrifting and flea market audience, pieces priced below \$200, to lower the barrier to a first purchase. Integrate with local NYC flea market communities (Brooklyn Flea, Queens Night Market) and collaborate with jewelry makers or other thrift creators on digital content.

Long-Term Strategy

1. Launch the "Collectors' Circle" Loyalty Program A paid premium membership that offers early access to new arrivals and exclusive limited-edition finds, monthly webinars on antique care, history, and restoration, reward points on every purchase redeemable for discounts, and access to a private community (Facebook group or Slack) where members share finds and connect with fellow vintage lovers. This drives repeat visits and builds emotional brand loyalty, the exact experience Sasha is seeking.

2. Add a "Flea Market Collection" Spotlight Section Feature a rotating homepage banner or dedicated section showcasing "This Week's Flea Market Finds" with countdown timers, limited-edition tags, and direct purchase links. Creates urgency and encourages repeat visits.

3. Streamline Navigation Trim navigation to key product categories (Bracelets, Earrings, Necklaces, Art, Sets) to reduce friction and guide users faster to what they want.

Target Growth KPIs

KPI	Goal
Bounce Rate	Reduce by 20%
Return Visitors	Increase by 35%
Email Signups	New KPI: begin tracking
Checkout completion rate	Improve from 0% baseline

Conclusion

Our analysis identified concrete, actionable ways for Antiques by Anna to reduce bounce rates, increase engagement, and build lasting customer loyalty. Quick wins like conversion tracking, email campaigns, and landing page improvements offer immediate gains. Long-term investments in a content hub and loyalty program will grow brand equity and create the curated, community-driven experience that a customer like Sasha is actively searching for.

"When you tell a story, you don't just sell a product — you create a memory."
